

Dear Sir or Madam,

I am writing this application to send to you my CV for your open position, and say a few things about myself. The description of your opening sounds exciting and appears to match my skill set and work experience.

A little bit about myself, I have a Master's of Science in Computer Science and Engineering, 5-year work experience as a Software Developer and Research and Teaching Assistant, and a couple of scientific publications. Please read more about my work and study related endeavors in the attached CV.

My professional skills include C#, .NET, VR & WebVR, AR/MR, Unity/Unreal engines, 3D UI/UX, Git/Github, 3D graphics, RESTful Web API, and some Web development too. Moreover, I am prepared to learn new skills and technologies if my current ones do not completely fit the job description. As it has been the case in the past, I am able to learn new skills required for a job or project quickly.

Regarding job expectations, it is always nice to do things that are fun, challenging, and motivating. Good, fun company culture is an important factor as well, and the possibility to mature as a professional and learn new things.

On a more personal note, colleagues have called me fun and easy to work with, and ambitious.

Please also take a look at my online portfolio where I put together some projects that I worked on and a couple of recommendation letters and publications:

<https://cipofl.github.io/>.

I am currently based in Oulu, and look forward to the opportunity to discuss more with you.

Sincerely,

Ciprian Florea
