December 3rd 2019

Letter of recommendation

To whom it may concern,

It is my pleasure to offer my recommendation for Mr. Ciprian Florea. I have known Mr. Florea since May 2017 when he joined our research unit as a research assistant. Since then, he worked in several projects involving 3D graphics, game engines and virtual reality related software development. Later on, he joined our international Master's program as an MSc student. Previous to working here, Mr. Florea had already gathered professional experience as a Unity developer, and he soon became a valuable asset to our research unit. During time spent with us, his skills merely increased, as he worked with various virtual reality hardware technologies, web-based VR, Unreal Engine and crowdsourcing platforms. In addition, he acted as a teaching assistant, and it can be seen that Mr. Florea can also take leadership roles, guiding others with his knowledge.

I have seen that Mr. Florea is a skilled software developer as well as a fast learner, and can quickly familiarize himself with various technologies. Mr. Florea has good problem solving and communication skills. He is not afraid to seek novel solutions and learn new skills to overcome technology related problems. I can certainly recommend Mr. Florea to various software engineering related tasks, especially those related to 3D graphics and game engine related technologies in any platform. I will also happily give additional information regarding Mr. Florea regarding my experiences working with him.

Sincerely,

Matti Pouke
Postdoctoral Researcher
Center for Ubiquitous Computing, Perception Engineering Laboratory
University of Oulu
